DIGITAL THERMOSTAT

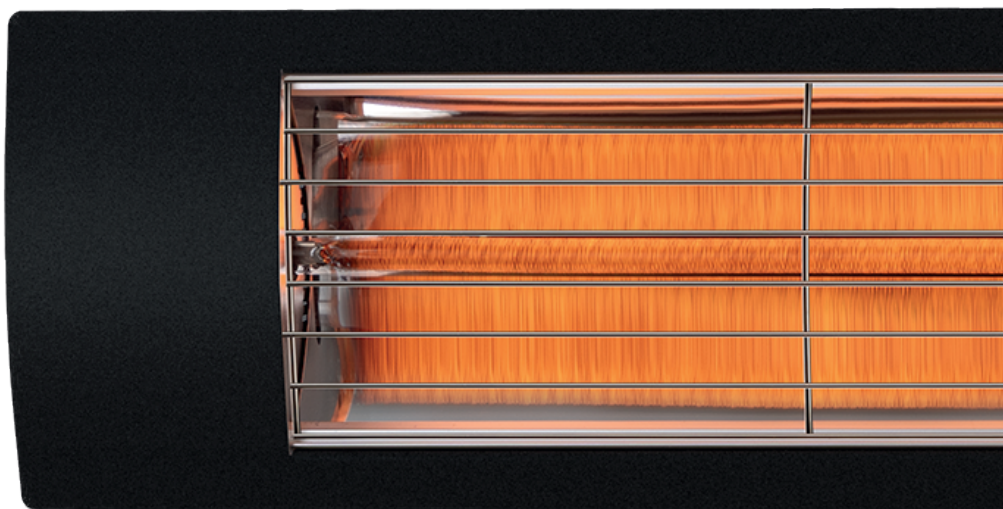

FROM REMOTE CONTROL

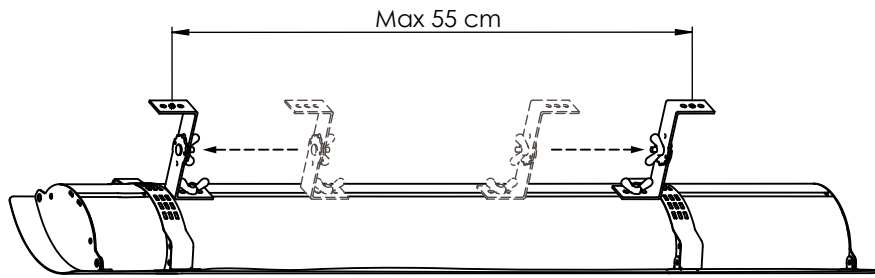

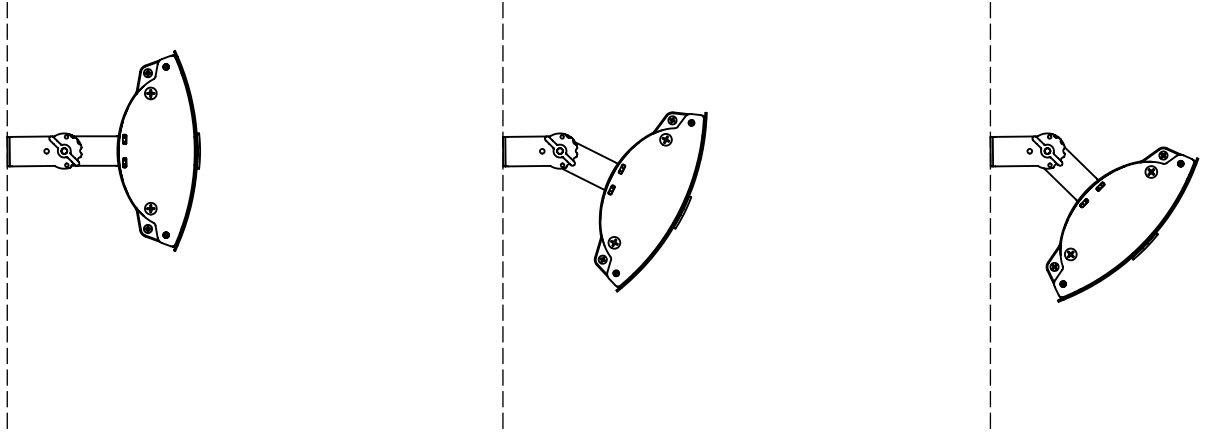

THE SPACE

Carbon infrared heater generates low-glare, medium-wave infrared heat. Its comfortable warmth is quickly distributed over a wide area, thanks to a specially designed reflector. The wavelength of the emitted light enables the heat to travel long distances, transforming into a pleasant warmth. The heating intensity can be easily adjusted using the remote control. This innovative heater operates with exceptional energy efficiency, eliminating the need for additional insulation. As a result, it not only reduces energy costs but also provides a consistent and comfortable environment year-round.

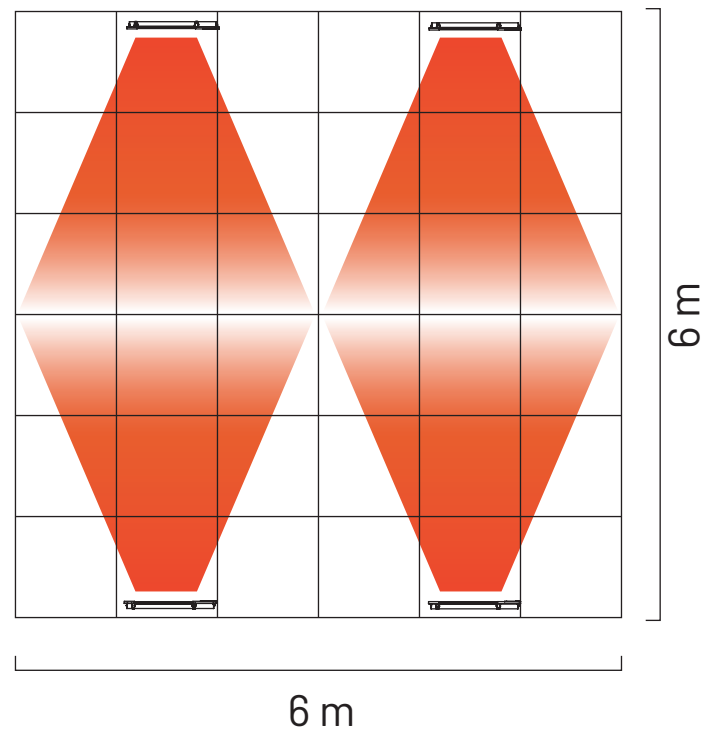

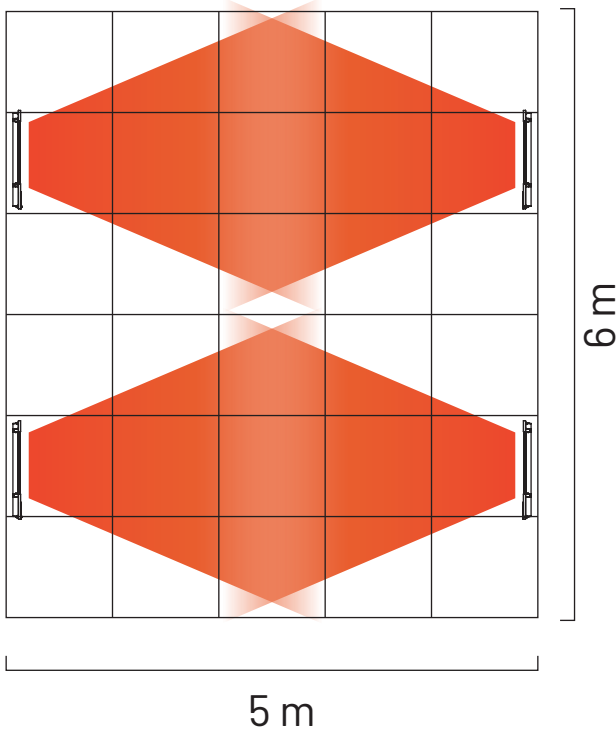

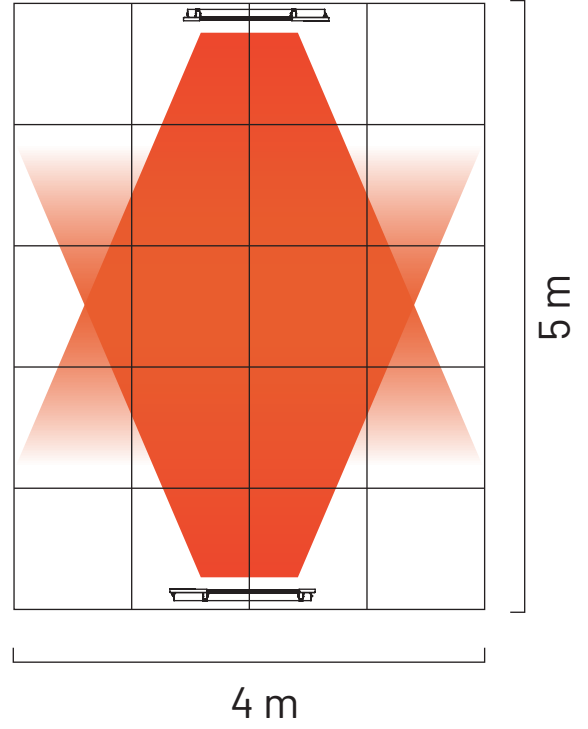

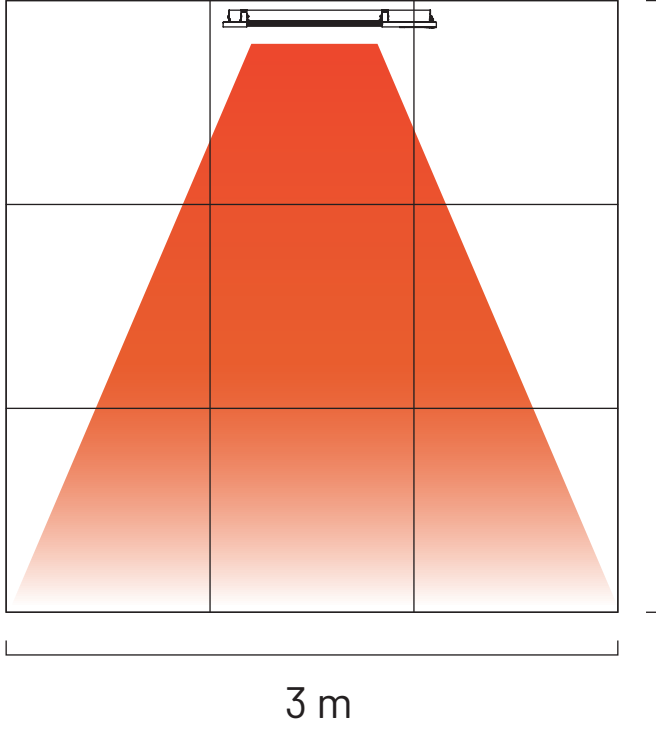

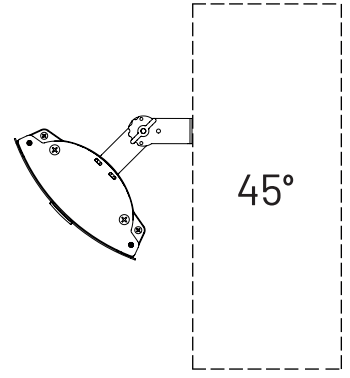

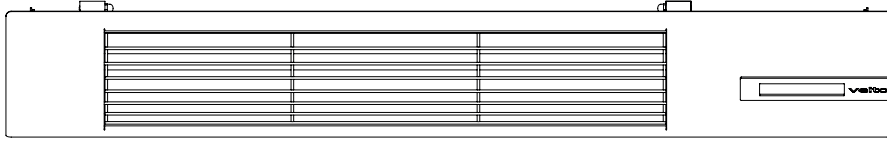

OUTDOOR COVERAGE AREA

AVERAGE 10M²
